REQUIREMENT TRACEABILITY MATRIX AND UAT-TEST CASES

Requirement ID	Requirement description	Priority	Verification method	UAT test case ID and scenario	Expected test results
FR-01	System must require a dependency flag (Yes/No). If Yes, Approver Function is mandatory.	Must have	Inspection / Functional test	**UAT-01:** Attempt to save a dependent action without selecting an Approver Function.	System blocks saving and displays a validation error requiring an Approver Function.
FR-02	System must timestamp “Approval Request Date” and start the SLA clock upon status change.	Must have	System log verification	**UAT-02:** Move a dependent action to *Pending Approval*. Verify timestamp in the Data Store.	“Approval Request Date” is auto populated with the exact UTC timestamp and SLA countdown initiates.
FR-03	System must calculate elapsed time daily and send an alert at the 1st SLA	Must Have	Automated notification test	**UAT-03:** Simulate an action exceeding the 1st SLA threshold without approval.	System dispatches an automated notification to the assigned Approver Function

	Breach threshold.				within the designated window.
FR-04	System must trigger a Tier-2 escalation to the Executive Sponsor at the 2nd SLA Breach threshold.	Must Have	Workflow escalation test	**UAT-04:** Simulate an action passing the 2nd SLA breach threshold.	System automatically routes an escalation task to the Executive Sponsor lane and logs the event.
FR-05	System must calculate composite “Risk Score” and rank the weekly PMO watchlist descending.	Must Have	Report verification	**UAT-05:** Generate the PMO watchlist with multiple active, breached, and escalated items.	Watchlist correctly sorts items by computed risk score (highest risk at the top).
FR-06	System must capture “Approval Date” at closure and prevent backdating prior to	Must Have	Boundary and date logic test	**UAT-06:** Try to approve an action with an “Approval Date” set prior to “Approval Request Date”.	System rejects the backdated entry and requires a valid current or subsequent timestamp.

	request date.				
FR-07	System must run daily checks to flag open items where “Last Modofied Date >= 90 days”.	Must Have	Scheduled job test	**UAT-07:** Run the 90-day stale item batch job against a test record inactive for 91 days.	Record is successfully flagged with “Scale Review Flag = True” on the PMO governance dashboard.
